

Associate Professor and Assistant Professor Positions, American University, Washington, DC

The Department of Mathematics and Statistics, the College of Arts and Sciences at American University (Washington, DC) has announced two openings:

1. Applied mathematics, with a focus in computational life sciences, probability, image and signal processing, or applied cryptography. Rank: Assistant or Associate Professor.
2. Computational neuroscience, broadly defined. (This is an open-department search and not necessarily for a mathematician, but perhaps a computer scientist, psychologist, etc.). Rank: Assistant Professor.

Note that the descriptions of these two positions overlap, and some candidates might find it appropriate to apply for both. Either position might be especially suitable for someone who has collaborators at NIH.
