

### **Director of Immunology (Job #0014)**

ContraFect is seeking a Director of Immunology – Reporting to the Chief Scientific Officer.

ContraFect is developing anti-infective therapies based on fully human monoclonal antibodies produced through phage display technology and anti-bacterial lysins.

The Director of Immunology will build a department to support ContraFect's pipeline of biological anti-infective therapeutics. The candidate should have knowledge of the pathophysiology of viral and bacterial infections and the host responses to such infections. The candidate will be responsible for managing our phage display antibody production activities as well as providing a center of expertise within the company for providing experimental dissection of the host's immunological responses to the disease process.

Experience to include:

- Phage display technologies
- Antibody characterization
- Human therapeutic antibody product discovery and development
- Characterization of immune responses to infectious diseases
- Cytokine and host cell responses to infectious diseases

Requirements:

This position requires a Ph.D. in immunology with at least four years of post-doctoral experience.

Ideal candidates will possess demonstrated project management skills, as well as strong teamwork interpersonal skills and a demonstrated ability to influence at many levels across many disciplines, both externally and internally.

**To Apply: Send cover letter describing your qualifications for the desired career opportunity (with #, please) and your resume/curriculum vitae to [jobs@contrafect.com](mailto:jobs@contrafect.com)**

**No phone calls, please.**
