

Postdoctoral Research Fellows – Melanoma Therapeutics/Melanocyte Biology

522 First Avenue, New York, NY 10016

NYU School of Medicine has an immediate opening for two highly motivated postdoctoral fellows to study:(1) developmental melanoma therapeutics – identification and development of small molecule therapeutics and elucidation of their mechanisms of action, and (2) cellular and molecular biology of melanin synthesis and deposition focused on the TYR and OCA2 gene products

Candidates demonstrating the ability to be creative, highly motivated, work independently and with a strong background in molecular and cell biology, and tissue cultures should apply. Good writing skills and skills in bioinformatics and proteomics are also desirable.

NYU School of Medicine offers a competitive compensation package and a stimulating work environment with a vibrant community of Melanoma/Melanocyte Biology researchers.

For further information and to apply, please forward your cover letter, curriculum vitae, and at least 3 references to: Seth J. Orlow MD, PhD c/o Elise Kelman, Research Administrator, skincancer@nyumc.org Fax: 212-263-5819. We are an equal opportunity employer.
